

CUSTOMER COMPLIANCE FOR SCRAP UNDERGROUND STORAGE TANKS

Industrial Recycling LLC, like most other industries in Connecticut, has developed certain management practices in order to comply with the growing volume of environmental regulations. Some of the existing laws pertaining to underground storage tanks have caused many facilities to replace or abandon steel tanks. For us to accept these tanks as scrap, the following requirements must be satisfied:

1. The tank must be cleaned and rendered free of any chemicals, oils, or hazardous materials including flammable vapors.
2. One end must have at least an 18-inch triangular cut out necessary for inspection and proper ventilation.
3. The owner of the tank must provide proof that it has been properly cleaned and certify in the space provided below that these requirements have been satisfied. A copy of this certification will be retained by Industrial Recycling LLC for our records.

Industrial Recycling LLC does not wish to cause our customers any unnecessary inconvenience. However, given the present (and future) regulatory climate here in Connecticut, we must insist on these conditions. **Please return a signed copy of this form to us prior to the delivery of the tank. Otherwise, we are unable to accept your used tank.**

We appreciate your understanding in the matter. If you have any questions, please do not hesitate to contact us.

We hereby certify compliance with Industrial Recycling LLC requirements as noted above for acceptance of scrap steel tanks.
